EUROPEAN VARIETIES

FURNISHED IN GENEROUS OVERSIZE PACKETS

FROM THE FLOWER GARDENS OF ENGLAND

For generations England has been famous for her flower gardens. It has been there, in England and Scotland, in the wonderful old country estates and public gardens that many of our most choice varieties have been created. It is to the old world gardeners with their patience, enthusiasm and love for their profession that we are indebted for the great advancement in, and perfection of, floriculture today.

Notes on Raising Flower Seeds

ANNUALS (HARDY). Those families which are sown and bloom the first season, the plants dying with the approach of Winter, such as *Alyssum, Calliopsis, Candytuft, Centaurea, Mignonette, Nasturtium, Poppy, Sweet Peas*, etc. Sow from April to June, the later sowings being confined to rapid-growing annuals only. The ground should be previously prepared by digging, working in a little manure at the same time. The surface should be made level and finely raked. If the weather is dry, give a watering some hours before sowing. Sow thinly and gently press the seed into the earth, covering lightly with finely sifted soil; the very small seeds must have very little covering. Keep the soil moist and shaded until the seedlings are up; the shade can be managed with branches of evergreens or sheets of paper fastened to little stakes. When large enough to handle, thin out freely, leaving space for each plant to develop to its full size. Thinning out is best done during dull, moist weather, or in the evening time. In calculating the distance that should be left between plant and plant, it may be taken as a general rule that plants which attain, when fully grown, a height of 1 foot, required to be thinned out to at least $\frac{1}{2}$ foot apart, and so on.

Many of the hardy annuals may be sown in August and September, for Spring and early Summer flowering, and if the seedlings are boldly thinned out at an early stage they become hardy and robust, producing finer plants and a greater profusion of bloom than when sown in Spring.

Hardy Annuals do not, in most cases, transplant well; they should therefore be sown, where intended to bloom.

Half-hardy Annuals. Slower in growth than the Hardy Annuals. They include *Antirrhinum, Aster, Cosmos, Marigold, Salpiglossis, Salvia, Stocks, Verbena, Zinnia*, etc. May be sown in March or April, in gentle heat, in pans, shallow boxes, or pots, a light sandy soil being used. Shade from the sun's rays till seedlings are up; this can be done by simply placing a newspaper lightly over them. As soon as the seedlings are large enough to handle, prick off into

shallow boxes, and when strong enough and all danger of frost is over, plant out on to well-prepared ground.

Those who have no convenience for sowing in heat can sow all Half-hardy Annuals in the open border middle of May.

GREENHOUSE FLOWERS such as *Calceolaria, Cineraria, Cyclamen, Primula* etc. Sow in gentle heat, in pans of loam, leaf soil and sand, in equal parts, placing a piece of glass over the pan and keeping shaded and moist until the seedlings are up; pot these off singly when large enough, and replace in heat, shading and keeping close until established, and pot on as necessary.

PERENNIALS. Those plants which do not usually blossom until the following year after sowing, but continue to flower and increase each year thereafter, many however, will flower the first season from seed if sown in February indoors, and planted out. Some popular perennials are *Aquilegia, Delphinium, Digitalis, Gaillardia, Hollyhock*, etc. Sow from March to July in pans or in drills on a prepared bed of light, rich soil and keep shaded and moist until the seedlings appear. Prick these out as soon as large enough to handle, into shallow boxes or nursery beds, and when strong enough transplant to permanent situations. Do not allow the seedlings to remain too long in the seed pans or to get starved for want of water.

Hardy Alpines. Seeds of Alpines, rock plants, and all hardy Primulaceae should be sown in pots or pans during early Winter, and after a good watering should be stood outdoors against a north hedge or wall where the soil can get frozen. Then when milder weather sets in, bring the pans into gentle warmth and the seeds will germinate freely. After March it is better to wait and sow the seed in Winter, giving the treatment as recommended above.

BIENNIALS require similar treatment to perennials. They include *Campanula, Pansy, Sweet William*, etc. The plants die after the flowering season.

NOTE.—In the case of very hard-shelled seeds it will be found a good plan to steep them in tepid water for some hours, previous to sowing, as this will hasten their germination.

SWEET PEAS and seeds which are liable to attack from mice should be steeped for half an hour in kerosene oil previous to sowing.

BOUNTIFUL, DIETZ'S SELECTED

One pound of beans is equal to about one pint, and will sow a row 50 feet long

Make drills about 2 inches deep and 2 to 2½ feet apart, sow seed 1 or 2 inches apart and cover. As the young plants grow, draw a little soil against them on both sides as a support, repeating from time to time as the plants develop. Pods should be picked for the table when about 4 inches long. Sowings may be made every 2 weeks up to August 10th.

Culture of Lima Beans:

Do not sow too early, wait until the soil is warm. **BUSH LIMA BEANS** should be sown in rows 2 feet apart, placing the Beans eye down every inch or two. When plants are about 2 inches high thin out to about 6 inches apart. **POLE LIMAS:** Prepare hills with poles 8 or 10 feet high, place 6 Beans to each hill, covering over about 2 inches. When plants reach the top of poles pinch off to increase crop.

CANADIAN CERTIFIED POTATOES, GROWING FOR SEED

Early Varieties

Beauty of Hebron. (*Maine Grown*). Popular early sort, very productive.

Bovee. (*Maine Grown*). Somewhat earlier than Early Rose, and a heavy cropper.

Carman No. 1. (*Maine Grown*). Early white.

Early Rose. (*Maine Grown*). A popular standard sort; first rate quality.

Irish Cobbler. (*Maine Grown*). One of the most popular varieties, splendid first early.

Irish Cobbler. (*Canadian Certified*). Extra choice, the finest procurable.

Noroton Beauty. (*Maine Grown*). Very early, productive sort, good cooking quality.

Main Crop Varieties

Carman No. 3. (*Maine Grown*). White flesh, heavy cropper; fine main crop.

Dibble's Russet. (*Maine Grown*). This variety is as near blight-proof as a Potato can be; extraordinary yielder and of good quality.

Gold Coin. (*Maine Grown*). A splendid main crop of remarkable productiveness and finest table quality; free from disease.

MAIN CROP VARIETIES—Continued

Sir Walter Raleigh. (*Maine Grown*). Enormous tubers, oblong in shape, uniform in size and of fine quality.

Uncle Sam. (*Maine Grown*). Heavy cropper, large tubers. A good and popular sort.

Late Varieties

Green Mountain. (*Maine Grown*). The most popular and widely grown variety. Large tubers, fine quality, and a good keeper.

Green Mountain. (*Canadian Certified*). Extra choice, the finest procurable.

Hustler. (*Maine Grown*). A new late variety. Produces large tubers with white flesh, remarkably disease-resisting, and will yield 15 to 20 barrels more per acre than any other sort.

Late Rose. (*Maine Grown*). A splendid late variety; large cropper, good quality.

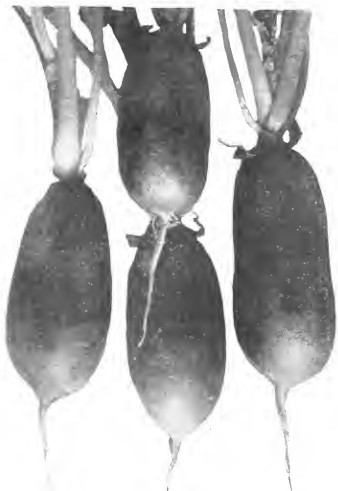

Long Island Wonder. (*Maine Grown*). This new Potato is destined to displace Green Mountain, to which it is very similar, but under the same conditions will produce about 15 barrels more per acre.

Rural New Yorker. (*Maine Grown*). Valuable late sort of large size.

KENTUCKY BLUE GRASS.

A very good natural grass with unlimited uses, either on lawns or meadows. It starts to grow early in Spring and when cool Fall weather arrives it will supply your lawn with that smooth green surface so much desired. It takes one year for Kentucky Blue Grass to become thoroughly established. Highly recommended for pasture and hay mixtures.

RED-TOP FANCY

A variety very thoroughly recleaned and of great value in lawn mixtures. If your lawn has not the appearance you desire we would highly recommend a liberal sowing of Red Top Fancy, together with a suitable plant food or lawn dressing, such as we offer in other sections of this catalog. Red Top is used in meadow and hay mixtures as it greatly improves the quality of the product.
